

ABSTRACT OF THE DISCLOSURE

There are provided an information processing apparatus, information providing apparatus, information processing system, and information processing method

5 which can reflect the intentions of the operator of the information providing apparatus and reduce the loads associated with processing in a server without harming user's convenience. For example, the information providing apparatus transmits the first list data to

10 the information processing apparatus. The information processing apparatus causes a function expansion program for a browser to acquire the second list data from the information processing apparatus and create the third list data on the basis of the acquired second

15 list data and the first list data transmitted by the transmission unit, thereby causing the browser to display the window based on the created third list data.
